Endoscopic submucosal tunnel dissection for large superficial esophageal squamous cell neoplasms

Ya-Qi Zhai, Hui-Kai Li, En-Qiang Linghu

Abstract

Endoscopic submucosal dissection (ESD) is a well-established treatment for superficial esophageal squamous cell neoplasms (SESCNs) with no risk of lymphatic metastasis. However, for large SESCNs, especially when exceeding two-thirds of the esophageal circumference, conventional ESD is time-consuming and has an increased risk of adverse events. Based on the submucosal tunnel
