**Bilateral renal cortical necrosis associated with smoking synthetic cannabinoids**

Kanaan Mansoor, Ashley Zawodniak, Tibor Nadasdy, Zeid J Khitan

#### Abstract

Synthetic cannabinoids have become a common drug of abuse in recent years and their toxicities have come to light as well. They are known to be notorious for the kidneys, with acute tubular necrosis, acute interstitial nephritis and rhabdomyolysis induced renal injury being the frequent nephrotoxic outcomes in users. We report a case of bilateral renal cortical necrosis, leading to irreversible renal damage and lifelong dialysis dependency.

**Key words:** Synthetic Cannabinoids, Renal Cortical Necrosis, Dialysis
