### COMMENTS TO AUTHORS

1. The patient is known osteosarcoma, thyroid cancer and hyperlipidemia. Did she receive any treatment for that; chemotherapy, radiotherapy, target therapy, immunotherapy, radioactive iodine?
2. What was the current status of CA thyroid and osteosarcoma?
3. Was there any evidence of prior renal issues - it is well known that renal functions alone are not an indicator of actual renal reserves esp when patient has history of malignancy?
4. it is difficult to be sure of relation ship in a patient with malignancy and other co-morbid conditions?
5. Did she receive any new treatment recently?

### COMMENTS TO AUTHORS

The manuscript is interesting, but the title is confusing because it does not address the kidney. Figures need to be improved and the discussion is poor. More pathogenetic pathways need to be added and a figure/drawing showing pathogenetic pathways may be very helpful.
