COMMENTS TO AUTHORS

This paper focusses on interaction between certain dietary elements and the aryl hydrocarbon receptor (AHR). This is amongst many lines of inquiry into pathogenesis and therapy of IBD. While I cannot see any problems in the paper, their conclusions may be rather on-sided. Saying "Future directions of study must center on the isolated function of the aryl hydrocarbon receptor " is somewhat overstating the case.

COMMENTS TO AUTHORS

The manuscript contains a good review about the the relationship between intestinal inflammation and diet. However , I agree with the other reviewer. The future studies should not be focused only on the aryl hydrocarbons receptors. The remaining text is good.
