### COMMENTS TO AUTHORS

According to my knowledge, in references, et al. should not be used. Please quote all authors, even when more than five. Authors described in the manuscript the current available information regarding zebrafish anatomy, histology and physiology. The successfully linked several biochemical pathways presented in humans in the zebrafish. Zebrafish is much more cheap and easy to use in experimental medicine, and could be used as a model for several diseases, as commented by authors. They also included information regarding each life time of zebrafish can be used to work with many diseases (IBD and obesity). The article is well written and worth of publishing in the WJEM.

### COMMENTS TO AUTHORS

This review paper is relevant and well-organized, and brings information that is likely to be useful to the readers of WJEM. However, despite its scientific interest, it contains a large number of mistakes in English, which must be corrected before a final recommendation is made.
