Alternative options in the management of patients after recovering from an acute episode of severe biliary pancreatitis

Georgia Dedemadi, Manolis Nikolopoulos, Ioannis Kalaitzopoulos, George Sgourakis

Abstract

Cholelithiasis is the most common cause of acute pancreatitis accounting approximately 35% to 60% of cases. 15%-20% of patients suffer a severe attack with a high morbidity and mortality rate. As far as the treatment is concerned,
