

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 85008

Title: Analysis of characteristic features in ultrasound diagnosis of fetal limb body wall complex during 11-13+6 weeks

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 06075103

Position: Peer Reviewer

Academic degree: MD, PhD

Professional title: Associate Professor, Doctor, Research Associate

Reviewer's Country/Territory: United States

Author's Country/Territory: China

SPECIFIC COMMENTS TO AUTHORS

In this study, the ultrasonographic data and follow-up results of 18 cases of fetal limb body wall complex diagnosed by prenatal ultrasound during early pregnancy were retrospectively analyzed, and their ultrasonographic characteristics were analyzed. The authors found that prenatal ultrasound in early pregnancy can detect limb body wall complex as early as possible, and correct prenatal evaluation provides important guidance value for pregnancy decision-making and early intervention. The study design is good, and the findings are interesting. After a minor correction of some minor language polishing, the manuscript can be accepted.

SPECIFIC COMMENTS TO AUTHORS

This study is very interesting. In this study, the authors explored the value of prenatal ultrasound in the diagnosis of fetal limb body wall complex syndrome during early pregnancy. The results are well present and discussed. The reviewer recommends to accept this study after a minor editing of the manuscript. Thank you.
