Hepatocellular carcinoma with concomitant hepatic angiolipoma and cavernous hemangioma in one patient

Xiao-Wen Ge, Hai-Ying Zeng, Akesu Su-Jie, Min Du, Yuan Ji, Yun-Shan Tan, Ying-Yong Hou, Jian-Fang Xu

Abstract

The risk of developing hepatocellular carcinoma (HCC) is strongly associated with hepatitis B virus (HBV) infection. Hepatic angiolipoma (AML), a rare benign tumor, is composed of a heterogeneous mixture of adipose cells, smooth muscle cells and blood vessels. Here, we report the case of a
