## COMMENTS TO AUTHORS

Well written and designed study. Most practitioners are mostly unaware of the staggering speed by which drugs are modifying and released in the street. This review gives pediatricians, ER doctors and physicians at large a view of what they are facing and the important message is that a negative urine screen does not rule out SC intoxication. This is especially true in a busy ER screening so that physicians should not think about other DDs for their patient's clinical picture. I think this is an important message to be conveyed in the conclusion

## COMMENTS TO AUTHORS

Introduction// Please include comment about current estimates indicate young secondary school students in the United States (8th grade) are using SC more than older students, including those in college (para two) Clinical effects//Consider using dysrhythmia instead of arrhythmia (para 4) Evaluation// Consider including an estimate of the number of adolescents using SCs and other substances, such as ethanol. (para 3) Treatment// Please provide guidelines for the inpatient vs outpatient treatment of these patients because SCs appear to have more psychological effects than marijuana.
