

# World Journal of *Clinical Cases*

*World J Clin Cases* 2024 March 6; 12(7): 1196-1381

## Contents

Thrice Monthly Volume 12 Number 7 March 6, 2024

## EDITORIAL

- 1196 Relevance of sleep for wellness: New trends in using artificial intelligence and machine learning  
*Nag DS, Swain A, Sahu S, Chatterjee A, Swain BP*

## MINIREVIEWS

- 1200 Expect the unexpected: Brown tumor of the mandible as the first manifestation of primary hyperparathyroidism  
*Majic Teng A, Cigrovski Berkovic M, Zajc I, Salaric I, Müller D, Markota I*
- 1205 Research progress in spasmodic torticollis rehabilitation treatment  
*Zhang S, Zeng N, Wu S, Wu HH, Kong MW*

## ORIGINAL ARTICLE

## Clinical and Translational Research

- 1215 Investigating the causal associations between five anthropometric indicators and nonalcoholic fatty liver disease: Mendelian randomization study  
*Xiao XP, Dai YJ, Zhang Y, Yang M, Xie J, Chen G, Yang ZJ*
- 1227 Causal role of immune cells in obstructive sleep apnea hypopnea syndrome: Mendelian randomization study  
*Zhao HH, Ma Z, Guan DS*

## Case Control Study

- 1235 Significant risk factors for intensive care unit-acquired weakness: A processing strategy based on repeated machine learning  
*Wang L, Long DY*

## Retrospective Cohort Study

- 1243 Perioperative and long-term results of ultrasonography-guided single- and multiple-tract percutaneous nephrolithotomy for staghorn calculi  
*Cheng RX, Dai N, Wang YM, Qi P, Chen F*

## Retrospective Study

- 1251 Clinical characteristics of testicular torsion and factors influencing testicular salvage in children: A 12-year study in tertiary center  
*Gang XH, Duan YY, Zhang B, Jiang ZG, Zhang R, Chen J, Teng XY, Zhang DB*

## META-ANALYSIS

- 1260 Effectiveness of sensory integration therapy in children, focusing on Korean children: A systematic review and meta-analysis  
*Oh S, Jang JS, Jeon AR, Kim G, Kwon M, Cho B, Lee N*
- 1272 Safety and efficacy comparison of remimazolam and propofol for intravenous anesthesia during gastroenteroscopic surgery of older patients: A meta-analysis  
*Li FZ, Zhao C, Tang YX, Liu JT*

## CASE REPORT

- 1284 Sporadic gastrinoma with refractory benign esophageal stricture: A case report  
*Chen QN, Bai BQ, Xu Y, Mei Q, Liu XC*
- 1290 Efficacy of borneol-gypsum in skin regeneration and pain control in toxic epidermal necrolysis: A case report  
*Yang LW, Zhang LJ, Zhou BB, Lin XY, Chen YT, Qin XY, Tian HY, Ma LL, Sun Y, Jiang LD*
- 1296 Extended survival with metastatic pancreatic cancer under fruquintinib treatment after failed chemotherapy: Two case reports  
*Wu D, Wang Q, Yan S, Sun X, Qin Y, Yuan M, Wang NY, Huang XT*
- 1305 Reconstruction of cervical necrotizing fasciitis defect with the modified keystone flap technique: Two case reports  
*Cho W, Jang EA, Kim KN*
- 1313 Reversal of complete atrioventricular block in dialysis patients following parathyroidectomy: A case report  
*Xu SS, Hao LH, Guan YM*
- 1320 Treatment of bilateral developmental dysplasia of the hip joint with an improved technique: A case report  
*Yu XX, Chen JY, Zhan HS, Liu MD, Li YF, Jia YY*
- 1326 Misdiagnosis of synovial sarcoma - cellular myofibroma with *SRF-RELA* gene fusion: A case report  
*Zhou Y, Sun YW, Liu XY, Shen DH*
- 1333 Heterochronous multiple primary prostate cancer and lymphoma: A case report  
*Liang JL, Bu YQ, Peng LL, Zhang HZ*
- 1339 Cardiac remodeling in patients with atrial fibrillation reversing bradycardia-induced cardiomyopathy: A case report  
*Gao DK, Ye XL, Duan Z, Zhang HY, Xiong T, Li ZH, Pei HF*
- 1346 Microsurgical management of radicular cyst using guided tissue regeneration technique: A case report  
*Gómez Mireles JC, Martínez Carrillo EK, Alcalá Barbosa K, Gutiérrez Cortés E, González Ramos J, González Gómez LA, Bayardo González RA, Lomeli Martínez SM*
- 1356 Delayed neurological dysfunction following posterior laminectomy with lateral mass screw fixation: A case report and review of literature  
*Yan RZ, Chen C, Lin CR, Wei YH, Guo ZJ, Li YK, Zhang Q, Shen HY, Sun HL*

- 1365** Translocation of a fish spike from the pharynx to the thyroid gland: A case report

*Li D, Zeng WT, Jiang JG, Chen JC*

- 1371** Double plasma molecular adsorption system for Stevens–Johnson syndrome/toxic epidermal necrolysis: A case report

*Tan YW, Liu LP, Zhang K*

### **LETTER TO THE EDITOR**

- 1378** Enhancing competency of clinical research nurses: A comprehensive training and evaluation framework

*Liu YX, Xu Y*

**ABOUT COVER**

Peer Reviewer of *World Journal of Clinical Cases*, Narendra Pamidi, PhD, Assistant Professor, Department of Anatomy, Melaka Manipal Medical College, Karnataka 576104, India. [narendra.pamidi@gmail.com](mailto:narendra.pamidi@gmail.com)

**AIMS AND SCOPE**

The primary aim of *World Journal of Clinical Cases* (WJCC, *World J Clin Cases*) is to provide scholars and readers from various fields of clinical medicine with a platform to publish high-quality clinical research articles and communicate their research findings online.

WJCC mainly publishes articles reporting research results and findings obtained in the field of clinical medicine and covering a wide range of topics, including case control studies, retrospective cohort studies, retrospective studies, clinical trials studies, observational studies, prospective studies, randomized controlled trials, randomized clinical trials, systematic reviews, meta-analysis, and case reports.

**INDEXING/ABSTRACTING**

The WJCC is now abstracted and indexed in Science Citation Index Expanded (SCIE, also known as SciSearch®), Journal Citation Reports/Science Edition, Current Contents®/Clinical Medicine, PubMed, PubMed Central, Reference Citation Analysis, China Science and Technology Journal Database, and Superstar Journals Database. The 2023 Edition of Journal Citation Reports® cites the 2022 impact factor (IF) for WJCC as 1.1; IF without journal self cites: 1.1; 5-year IF: 1.3; Journal Citation Indicator: 0.26; Ranking: 133 among 167 journals in medicine, general and internal; and Quartile category: Q4.

### Abstract

The Sun *et al*'s training program for clinical research nurses (CRNs) in the *World Journal of Clinical Cases* is a comprehensive and scientific approach. It includes structured frameworks for CRN training, aiming to improve CRN competency. This program emphasizes practical abilities, updates training content, and improves evaluation methods. The cultivation of CRN talents focuses on enhancing the training system, establishing a multifaceted evaluation framework, and continuously refining the training programs. Regular feedback and evaluation are essential to improve CRNs' competency in practical settings.

**Key Words:** Clinical research nurse; Framework; Nurse; Operations; Practice; Structure

©The Author(s) 2024. Published by Baishideng Publishing Group Inc. All rights reserved.

**Core Tip:** The existing training model for research nurses requires enhancement as it disproportionately focuses on theoretical knowledge while neglecting practical skills, resulting in a discernible disconnect between theory and its application. Furthermore, the evaluation methods in use are not up to date and fall short in accurately gauging practical abilities. To bridge this gap, it is recommended to augment the curriculum with a stronger emphasis on practical operations and case studies, adopt a dynamic system for updates, and refine evaluation techniques. These measures will equip research nurses more effectively for clinical practice.

## TO THE EDITOR

We are delighted to read the high-quality article by Sun *et al*[1], published in the *World Journal of Clinical Cases*. The main focus of this article is on the development of a training program for clinical research nurses (CRNs) based on job competency, with the aim of accelerating the construction of a CRN talent pool and providing scientific guidance for CRN training. Through literature research and qualitative interview results, combined with Delphi method consultation with 16 experts in two rounds, a training program was identified. This training program includes 4 first-level indicators, 15 s-level indicators, and 74 third-level indicators, providing a scientific basis for participation in CRN training.

## THE CURRENT SITUATION AND CHALLENGES OF CRN TALENT CULTIVATION

The latest research by Jie Sun has sparked our team's observations and reflections on the current training model for research nurses. The importance of CRNs in the healthcare system is increasingly apparent, as their professionalism and practical abilities have a direct impact on the quality of healthcare and patient satisfaction. However, I have observed that there are several issues with the current training model for research nurses that can affect the quality of their training.

First and foremost, it is essential to acknowledge that the current training model excessively emphasizes the transmission of theoretical knowledge[2], while overlooking the cultivation of practical abilities. Although theoretical knowledge is fundamental, the work of research nurses emphasizes practical operations and problem-solving abilities. Therefore, we must refine the training content to increase the proportion of practical operations and case studies to render the training more pertinent to actual work situations.

Moreover, the speed of updating training content is sluggish and fails to match the rapid advancement of medical technology. The emergence of new technologies and techniques necessitates the constant updating of our knowledge base, yet the current training materials have not been able to keep up with these changes. Therefore, it is essential to establish a dynamically updated training system and regularly update and refine the training content.

Lastly, it is worth noting that there are also challenges with the evaluation methods for training. The current evaluation methods are too simplistic, primarily based on theoretical examinations, making it difficult to comprehensively assess the actual abilities of research nurses. Therefore, it is necessary to improve the evaluation methods during the assessment process of nurses by incorporating more practical operations and case-based evaluation methods to more accurately evaluate their skill levels.

In conclusion, there is an urgent need to reform the current training model for research nurses. By optimizing the training content, establishing a dynamically updated training system, and improving assessment methods, we can enhance the quality of research nurse training and foster more outstanding talents for the healthcare industry[3] (See Table 1).

## KEY ASPECTS OF CRN TALENT CULTIVATION

The cultivation of CRN talents can be focused on several key aspects (see Figure 1). Initially, it is essential to enhance the training system for CRN. As Jie Sun's research[1] indicates, while CRN plays a pivotal role in clinical trials, there are still gaps in its training system. Therefore, it is imperative to further enhance CRN's training system, particularly in professional practice, management skills, communication and coordination abilities[4], and critical thinking skills. Secondly, a multi-faceted assessment and evaluation framework is necessary[5]. Respondents concurred that a comprehensive evaluation of CRN's competency framework is essential. This necessitates an assessment and evaluation that is multifaceted, beyond traditional evaluation criteria. Consideration should be given to introducing more simulations of real-work scenarios and evaluations based on actual performance. Thirdly, the training programs require continuous refinement[6]. As the training model for clinical research nursing is still in its infancy, it is imperative to constantly refine and optimize the training programs. This can be achieved by soliciting feedback from CRN in practical settings or periodically evaluating the effectiveness of the training. Fourthly, it is essential to collaborate with other fields. Clinical trials involve multiple disciplines and fields; hence CRN training must consider interdisciplinary cooperation with clinicians [7], pharmacists, biostatisticians, and more. This interdisciplinary cooperation can enhance CRN's coordination and communication abilities throughout the clinical trial process. Fifthly, we must leverage modern technology. With technological advancements, distance education and online learning have become feasible. Therefore, more online courses, virtual reality simulation training, and other modern training methods can be considered to provide more flexible and diverse training options. Sixthly, attention should be paid to CRN's career development. Beyond providing quality training, emphasis should be placed on CRN's career advancement[8-11]. Opportunities for promotions should be available or a comprehensive career development plan should be established to assist CRN in achieving their professional aspirations. Lastly, a feedback mechanism should be established[12,13]. To enhance the efficacy of training, it is imperative to establish a feedback mechanism for CRN. This can be achieved through regular surveys to assess satisfaction, focus group discussions, and other means. By promptly understanding CRN's needs and expectations, we can refine the training program accordingly.

In summary, the cultivation and advancement of CRN necessitate comprehensive consideration and improvement across multiple dimensions. This encompasses not only the refinement of training content and methods but also effective collaboration with other fields, career development opportunities, and more.

Table 1 The current nursing education model's shortcomings and suggestions for improvement	
Disadvantage	Suggestions
Theory is more important than practice	Refine the training content and increase the proportion of practical operations
Content is not synchronized with medical technology	Establish a dynamic and updated training system and update and optimize it regularly
The evaluation method is not comprehensive	Increase the proportion of practical operations and case evaluations

Figure 1 Key elements for cultivating high-quality clinical research nurses. CRN: Clinical research nurse.

CONCLUSION

The current training model for research nurses is in need of improvement. It overemphasizes theoretical knowledge and lacks practical skills, leading to a gap between theory and practice. Evaluation methods are also outdated, failing to accurately assess practical skills. Recommendations include enhancing the practical operation and case study content, implementing a dynamic update system, and improving evaluation methods. This will better prepare research nurses for their clinical work.
