Abstract

AIM: It is difficult to treat non-ulcer dyspepsia (NUD), which is a common disease in clinic, since its pathogenesis is unclear so far. The purpose of this study was to investigate whether NUD patients had

impaired gastric emptying.

METHODS: Sixty-four patients with NUD were studied premeditatedly by the method of radiopaque markers and treated with domperidone.

RESULTS: 59.4% of NUD patients had impaired gastric emptying and domperidone could relieve symptoms in the NUD patients.

Key words: Non-ulcer dyspepsia; Gastric emptying; Domperidone
