Arrhythmogenic epilepsy and pacing need: A matter of controversy

Alper Kepez, Okan Erdogan

Abstract

There is increasing awareness among the cardiology community regarding ictal bradyarrhythmias as a cause of loss of consciousness. A high degree of suspicion is necessary when diagnosing ictal bradyarrhythmias, and delay in diagnosing this condition may lead to morbidity associated with falls and trauma. Ictal bradyarrhythmias have also been suggested to be associated with sudden unexplained death in epilepsy (SUDEP), although evidence related to this association is limited. There is no guideline-directed therapy for symptomatic ictal
