5 A case of unilateral neuropathic arthropathy of the shoulder secondary to syringomyelia: Diagnostic challenge for clinicians

7 Partha Pratim Chakraborty, Saumik Datta, Sayantan Ray, Rana Bhattacharjee, Subhankar Chowdhury

9 Abstract

10 Neuropathic arthropathy of the shoulder is a rare disorder characterized by joint destruction secondary to loss of sensory
11 innervation. Here we report a case of unilateral neuropathic arthropathy of the shoulder secondary to syringomyelia in a 40-year-
12 old lady which caused a diagnostic dilemma. Plain X-ray of left shoulder revealed destructive changes along with loss of bone and
13 joint architecture, compatible with a Charcot joint. She was also detected having severe vitamin D deficiency with secondary
14 hyperparathyroidism. Magnetic resonance imaging (MRI) of cervical spine showed large syrinx from the 2nd cervical to the 2nd
15 dorsal spine. Neuropathic arthropathy, although less common, should be considered in cases of unexplained pain, and limited
16 range of motion of the affected joint. Symptoms related to the affected joint may precede or overshadow neurological deficits.
17 Correct radiologic diagnosis is important, otherwise the underlying cause for the bone and joint disorder might go undetected and
18 the radiologic findings could be confused with other possible causes. .
