Treatment strategies for multiple sclerosis: When to start, when to change, when to stop?

Alberto Gajofatto, Maria Donata Benedetti

**Abstract**

Multiple sclerosis is a chronic inflammatory condition of the central nervous system determined by a presumed autoimmune process mainly directed against myelin components but also involving axons and neurons. Acute demyelination shows as clinical relapses that may fully or partially resolve, while chronic demyelination and neuroaxonal injury lead to persistent and irreversible neurological symptoms, often
