Name of Journal: *World Journal of Clinical Cases***ESPS Manuscript NO:** 28069**Manuscript Type:** Case Report**Paclitaxel-associated reticulate hyperpigmentation: Report and review of chemotherapy-induced reticulate hyperpigmentation****Philip R Cohen****Abstract**

Drug-induced reticulate hyperpigmentation is uncommon. Including the patient described in this report, chemotherapy-associated reticulate hyperpigmentation has only been described in ten individuals. This paper describes the features of a woman with recurrent and metastatic breast cancer who developed paclitaxel-induced reticulate hyperpigmentation and reviews the characteristics of other oncology patients who developed reticulate hyperpigmentation from their antineoplastic treatment. A 55-year-old Taiwanese woman who developed reticulate hyperpigmentation on her abdomen, back and extremities after receiving her initial treatment for metastatic breast cancer with paclitaxel is described. The hyperpigmentation became darker with each subsequent administration of paclitaxel. The drug was discontinued after five courses and
