 Safety and efficacy of anti-tumor necrosis factors  $\alpha$  in patients with psoriasis and chronic hepatitis C

Monica Salvi, Laura Macaluso, Cecilia Luci, Carlo Mattozzi, Giovanni Paolino, Yvonne Aprea, Stefano Calvieri, Antonio Giovanni Richetta

**Abstract**

Up to date, in literature, it is still debated the role of anti-tumor necrosis factors (TNF)- $\alpha$  treatments in hepatitis C virus (HCV) patients. TNF- $\alpha$  performs a lot of functions, it is an important pro-inflammatory cytokine and it is involved in the host's immunity. Since TNF- $\alpha$  is implicated in the apoptotic signaling pathway of hepatocytes infected by HCV, anti-TNF- $\alpha$  therapy may increase the risk of viral replication or their reactivation.
