Ticagrelor therapy and atrioventricular block: Do we need to worry?

Elia De Maria, Ambra Borghi, Letizia Modonesi, Stefano Cappelli

Abstract

Ticagrelor is a potent, direct P2Y₁₂ antagonist with rapid onset of action and intense platelet inhibition, indicated in patients with acute coronary syndromes (ACS). This drug is usually well tolerated, but some patients experience serious adverse effects: major bleeding; gastrointestinal disturbances; dyspnoea; ventricular pauses >3". Given the unexpected high incidence of bradyarrhythmias, a PLATO substudy monitored this side effect, showing that ticagrelor was associated with an increase in the rate of sinus bradycardia and sinus arrest compared to clopidogrel. This side effect was usually transient, asymptomatic and not
