**Name of Journal:** *World Journal of Clinical Cases***Manuscript NO:** 33105**Manuscript Type:** Case Report**Recurrent aneurysmal bone cyst of talus resulted in tibiototalcaneal arthrodesis****Amir R Vosoughi, Kamran Mozaffarian, Mohammad A Erfani****Abstract**

Aneurysmal bone cyst (ABC), a locally benign aggressive lytic lesion of either primary or secondary origin, seldom involves the talus. Herein, we present a 25-year-old man with recurrent ABC of the talus after curettage and bone grafting, which was managed by total resection followed by filling the defect using fibular graft and finally tibiototalcaneal arthrodesis due to articular surface involvement. At 18 months postoperatively, no recurrence was detected. Arthrodesis might be a good option in cases with recurrent ABC of the talus especially with articular surface involvement.
