Rectal perforation caused by inadvertent ingestion of a blister pack: A peculiar case report and literature review

Fleres Francesco, Ieni Antonio, Saladino Edoardo, Speciale Giuseppe, Aspromonte Michele, Antonio Cannaò, Macrì Antonio

Abstract

The accidental ingestion of a foreign body (FB) is a relatively frequent circumstance. In the present study, we report a peculiar case of rectal perforation, the first to our knowledge, caused by the inadvertent ingestion of a blister pill pack (BPP). The aim of this report is to illustrate the difficulties of the case from a diagnostic and therapeutic viewpoint as well as its unusual presentation. We report a case of a 75 year-old woman, mentally impaired, that arrived to our emergency department in critical condition. The CT scan revealed a substantial abdominopelvic peritoneal effusion and free perigastric air. The patient was
