Noteworthy effects of a long-pulse Alexandrite laser for the treatment of high-risk infantile hemangioma: A case report and literature review

Su WT *et al.* The treatment of a high-risk IHs by long-pulse Alexandrite laser

Wen-Ting Su, Ji-Xin Xue, You-Hui Ke

## Abstract

### BACKGROUND

We have previously proved that treatment of thick/deep infantile hemangiomas (IHs) with a long-pulse Alexandrite laser was clinically effective and safe. This article aims to investigate the efficiency of long-pulse Alexandrite laser use in treating thick and high-risk IHs located in particular anatomic areas and provides some new data on this issue.
