fundic gland, called gastric adenocarcinoma of the fundic gland type(1) (GA-FG). This type of gastric carcinoma commonly occurs in the upper portion of the stomach in the elderly and is derived from the deep part of the normal fundic gland without atrophy; furthermore, even

In recent years, there have been reports of a new histological type of gastric cancer, termed gastric adenocarcinoma of the fundic gland (GA-FG). The disease entity presents differentiation towards the fundic gland, especially chief cell-predominant differentiation (GA-FG-CCP). GA-FG-CCP easily invades into the submucosa but rarely shows metastasis. The reports describe
