## Aberrant Right Subclavian Artery And Common Carotid Trunk

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3317287>

**Aberrant Right Subclavian Artery And Common Carotid Trunk.** An aberrant right subclavian artery occurs when the right fourth arch and the proximal right dorsal aorta abnormally regress. The right subclavian artery then develops from the right seventh intersegmental artery and the distal right dorsal aorta.

5 **Abstract**

6 **BACKGROUND**

7 We report a rare case of numbness in the right hand, finally diagnosed as bilateral

8 common carotid artery common trunk with aberrant right subclavian artery combined

9 with right subclavian steal syndrome, and explain the cause of these diseases.

10

11 **CASE SUMMARY**

12 The patient was a 65-year-old woman. She complained of dizziness, numbness and

13 weakness of the right hand for six months. She was diagnosed with bilateral common

14 carotid artery common trunk with aberrant right subclavian artery combined with

15 right subclavian steal syndrome by ultrasound, enhanced computed tomography (CT),

16 CT angiography, and other examinations. Considering the surgical risks, the patient

17 refused the aberrant right subclavian artery stent implantation and was discharged.

## Left and Right Subclavian Artery Function, Branches, Stenosis

<https://healthjade.net/subclavian-artery> ▾

Three large arteries arise from the aortic arch to collectively supply the head, neck, shoulder, and upper limbs: the brachiocephalic trunk, the left common carotid artery, and the left subclavian artery. The brachiocephalic trunk (brachiocephalic artery) gives rise to the right subclavian artery and the right common carotid artery.
