Case Report: Aspergillus and mucormycosis presenting with ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3987642>

Invasive aspergillus and mucormycosis infection are not uncommon in immunocompromised individuals. Endobronchial fungal infections have been reported in the literature, especially in patient's with diabetes complicated by diabetic ketoacidosis, but end **bronchial** coinfection with aspergillus and mucormycosis without pulmonary involvement has not been described in the literature.

Endobronchial aspergilloma: A case report and literature ...

<https://www.spandidos-publications.com/10.3892/etm.2017.4540> ▾

Jun 01, 2017 - Endobronchial aspergilloma (EBA) is a rare disease, described as a massive non-**invasive** overgrowth of the aspergillus species in **bronchial** lumen, causing space-occupying lesions (5,6). It is often incidentally diagnosed during bronchoscopy to evaluate the cause of hemoptysis (5 , 6), and may be considered as another form of pulmonary ...

Invasive aspergillosis presenting as hilar masses with stenosis of bronchus: A case report

Shan-Shan Su, Ying Zhou, Han-Yan Xu, Ling-Ping Zhou, Cheng-Shui Chen,
Yu-Ping Li

Abstract

BACKGROUND

Hilar masses with stenosis of bronchus occur mainly due to malignant diseases, such as lung cancer. Hilar masses resulting from invasive aspergillosis (IA) are extremely rare and occur mostly in severely immunosuppressed patients.

CASE SUMMARY

In the current case report, we have documented a unique case of IA presenting as a mass in hilum and bronchial stenosis under bronchoscopy, mimicking lung cancer in a 54-year-old man with diabetes mellitus. The histological analysis of bronchial membrane biopsy demonstrated fungal elements of 45° branching hyphae with positive Periodic Acid-Schiff and
