The authors **report** the first **case** of **exogenous endophthalmitis caused by Enterococcus casseliflavus** via the unique mechanism of high-velocity water stream trauma from a toy water gun. A previously healthy four-year old boy presented with **endophthalmitis** of the left eye after injury from a water gun.

Herein, we report a case of endogenous endophthalmitis caused by Enterococcus casseliflavus. The organism was sensitive to gentamicin, vancomycin and chloramphenicol and resistant to cefazolin, ofloxacin, gatifloxacin and ciprofloxacin. The patient was successfully treated with vitrectomy and sensitivity-based intravitreal vancomycin.
