Primary parahiatal hernias: Case report and review of the literature

INTRODUCTION

Parahiatal hernia (PHH) represents a type of diaphragmatic hernia in which a herniation occurs through a defect in the diaphragm, adjacent to an anatomically intact esophageal hiatus. ¹ Its incidence is very rare, only a small number of cases being reported in the literature so far.

Because of its close relation to the hiatus, similar symptom presentation, imagistic findings and treatment, most authors include this type of diaphragmatic hernia with hiatal hernia, while other authors consider them as a rare variant of paraesophageal hernias^[1]. From an ethiopathogenic standpoint, PHHs can be classified as either primary or secondary to a surgical intervention that involved the hiatal orifice as in

Primary perineal hernia: a case report and review of the ...

<https://link.springer.com/article/10.1007/s10029-006-0114-2> ▾

Jul 21, 2006 · Only about 100 cases have been reported in the literature [7]. There is scarce information about congenital perineal hernias. Nieto-Zermeno et al. reported about a general disturbance of the extracellular matrix as seen in an infant with a primary perineal hernia and generalised primary elastosis [8]. Sciacca et al.

Feb 19, 2013 · Introduction. Parahiatal hernia is an extremely rare subtype of hiatal hernia, which in turn is a type of diaphragmatic hernia in adults, and only a few cases have been reported to date. We report the case of a patient who suffered from gastric incarceration through an anatomically separate diaphragmatic defect,...

Jul 21, 2006 · The literature shows many different approaches for treatment of perineal hernia, such as open or laparoscopic mesh repair, and perineal, abdominal or combined access. Our case confirms that **primary closure of the hernial orifice** through an abdominal approach is also feasible.
