## Pediatric KIT–Wild-Type and Platelet-Derived Growth Factor ...

[cancerres.aacrjournals.org/content/67/19/9084](https://cancerres.aacrjournals.org/content/67/19/9084) ▼

Oct 01, 2007 · Fewer than 15% of gastrointestinal stromal tumors (GIST) in pediatric patients harbor KIT or platelet-derived growth factor receptor  $\alpha$  (PDGFRA) mutations in contrast to a mutation rate of 80% in adult GISTs. However, some therapeutic inhibitors of KIT have efficacy in pediatric GIST, suggesting that KIT may, nevertheless, play an important role in oncogenesis.

[clincancerres.aacrjournals.org/content/14/14/4550](https://clincancerres.aacrjournals.org/content/14/14/4550) ▾

Jul 15, 2008 · NF-1–associated GISTs are usually wild type for c-KIT and platelet-derived growth factor receptor- $\alpha$  (PDGFR- $\alpha$ ) mutations and harbor a different oncogenic molecular mechanism. The lack of data on imatinib activity raises the question whether to enroll these patients in clinical trials.
