Sarcomatoid intrahepatic cholangiocarcinoma mimicking liver abscess: A case report

Yan Wang, Jia-Lei Ming, Xing-Yu Ren, Lu Qiu, Li-Juan Zhou, Shu-Dong Yang, Xiang-Ming Fang

Abstract

BACKGROUND

Sarcomatoid intrahepatic cholangiocarcinoma is an extremely rare and highly invasive malignant tumor of the liver. According to our knowledge, the imaging findings of sarcomatous cholangiocarcinoma have been rarely reported; and its radiological features mimicking liver abscess have not yet been reported.

CASE SUMMARY

We herein present a case of sarcomatoid intrahepatic cholangiocarcinoma mimicking liver abscess. The patient, a 43-year-old male, complained of repeated upper right abdominal discomfort and intermittent distension over a period of one month. Radiology examination revealed a huge focal lesion in the right liver. The lesion was presented as hypointense on a computed tomography with honeycomb enhancement surrounded by enhanced peripheral areas. It showed

Intrahepatic Sarcomatous Cholangiocarcinoma: Case Report ...

<https://www.hindawi.com/journals/cris/2018/3862575> ▾

The authors report a case of a patient with intrahepatic sarcomatous cholangiocarcinoma. A 45-year-old Thai man presented with a 3-month history of right upper abdominal pain. CT scan revealed hepatomegaly with a 6.5 cm hypovascular soft tissue density mass in the right lobe and showed mild delayed enhancement.

Jul 09, 2015 · Hepatic TB lacks typical clinical manifestations and can be difficult to differentiate from other malignancies such as hepatocellular carcinoma, intrahepatic cholangiocarcinoma (iCCA), klatskin tumor, and liver abscess using imaging modalities. Therefore, primary hepatic TB can be easily misdiagnosed. Here, we report two cases of primary hepatic TB mimicking mass-forming iCCA.
