<https://www.sciencedirect.com/science/article/pii/S156899721200119X>

Since their appearance, IVIg therapy has been used extensively for some systemic manifestations of ADs such as severe compromise of SLE, especially in the case of cytopenias (e.g. autoimmune hemolytic anemia, thrombocytopenia, pancytopenia), refractory pleuritis, pericarditis, myocarditis, nephritis, vasculitis, and neuropsychiatric lupus refractory to conventional treatment, . The use of IVIg has been accepted for the treatment of Guillain...

## Dramatic response to plasma exchange in systemic lupus ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3902577>

As there was no improvement on **pulse steroids**, **plasma exchange** was planned. Patient was assessed by **transfusion medicine team** and taken up for the **plasma exchange** on day 2 of ICU admission. Six cycles of **plasma exchange** were administered on alternate days by **exchanging one plasma volume**, using 4% human Serum Albumin as replacement fluid.

## Life threatening pneumonia in a lupus patient: a case report

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2526065>

Jul 31, 2008 · **Fulminant lupus pneumonitis** is a rare but potentially life threatening complication of SLE. Differential diagnosis requires exclusion of **pneumonia** induced by **pathogens** such as *Pneumocystis jirovecii* (*carinii*) and **Mycobacterium sp.** Intensive immunosuppressive therapy and close cooperation between ICU, pulmonology and rheumatology departments is necessary in such a ...

## Life threatening pneumonia in a lupus patient: a case ...

<https://casesjournal.biomedcentral.com/articles/10.1186/1757-1626-1-70>

Jul 31, 2008 · A **fulminant course** of the **disease**, an interstitial pattern in a high resolution computed tomography (HRCT) and negative repeated sputum, blood and bronchoaspirate cultures enabled diagnosis of **fulminant lupus pneumonitis**. The response to pulses of **cyclophosphamide** and methylprednisolone was good but complicated with a **significant leukopenia**.
