**Paraplegia after transcatheter artery chemoembolization in a child with clear cell sarcoma of the kidney: A case report**

Cai JB *et al.* Rare complication after transcatheter artery chemoembolization

Jia-Bin Cai, Min He, Fa-Liang Wang, Jie-Ni Xiong, Jun-Qing Mao, Zhong-Hai Guan, Lin-Jie Li, Jin-Hu Wang

### Abstract

#### BACKGROUND

Transcatheter arterial chemoembolization (TACE) is one common treatment form for inoperable malignant renal tumors. However, a series of complications may follow the TACE treatment. Along with these complications, spinal cord injury caused by the embolization of intercostal or

## Neoadjuvant transcatheter arterial chemoembolization and ...

<https://www.sciencedirect.com/science/article/pii/S0022346818306092>

**Clear cell sarcoma** of the **kidney** (CCSK) is a rare and aggressive **malignant renal tumor**. We describe our experience with **neoadjuvant transcatheter arterial chemoembolization (TACE)** and **systematic chemotherapy** for the **treatment** of advanced **CCSK in children**.

## Transcatheter Arterial Chemoembolization for Liver Cancer ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4352323>

Introduction. **Transcatheter** arterial **chemoembolization** (TACE) is the mainstay of catheter-based therapies for unresectable primary liver cancer, and its use is expanding for other hepatic metastatic malignancies [1, 2]. The procedure of TACE has technically and scientifically evolved since its introduction almost 30 years ago.

<https://www.ncbi.nlm.nih.gov/books/NBK373367>

In patients with extended **renal carcinoma**, survival was significantly higher **after chemoembolization** than after standard embolization of the **renal artery**. Animal experiments revealed that **renal arterial chemoembolization** can maintain high local concentrations of the anticancer drug, while maintaining low blood levels of the anticancer drug ( 59 , 60 ).
