Endoscopic pedicle flap grafting in the treatment of esophageal fistulas: A case report

Abstract

BACKGROUND

Fistulization is a rare complication of esophageal diverticula. Patients with this condition often require surgery, which, unfortunately, can be invasive and traumatic. Endoscopic therapy is an alternative method for treating esophageal

Publish Year: 2018 位置: 8600 Rockville Pike, Bethesda, MD

Here, we report a patient who suffered TEF as a post-operative complication due to anastomosis leakage after esophageal cancer surgery and was successfully repaired with a thymic pedicle flap. This is the first report to use thymus flap for surgical repair of TEF caused after esophageal cancer surgery.
