Himanshu Deshwal, Subha Ghosh, Kathleen Hogan, Olufemi Akindipe, Charles Randall Lane, Atul C Mehta

Abstract**BACKGROUND**

End-stage chronic obstructive pulmonary disease (COPD) is one of the common lung diseases referred for lung transplantation. According to the international society of heart and lung transplantation, 30% of all lung transplantations are carried out for COPD alone. When compared to bilateral lung transplant, single-

Jan 01, 2008 · Here we present a case of sequential bilateral **single-lung transplant recipient** who experienced several episodes of **spontaneous pneumothorax** in the donated **lung** received from a habitual cocaine abuser. A 38-year-old female nonsmoker underwent sequential bilateral **single-lung transplantation**. Her postoperative course was uneventful.

Management of Pneumothorax in ...

[https://journal.chestnet.org/article/S0012-3692\(15\)50707-1/fulltext](https://journal.chestnet.org/article/S0012-3692(15)50707-1/fulltext)

Pneumothorax is a common complication of lymphangioleiomyomatosis (LAM), and the optimal approach to its treatment and prevention is unknown. Chemical or surgical pleurodesis are often required to prevent recurrence. However, their efficacy in LAM is unclear, and whether they contribute to perioperative complications during **lung transplantation** is uncertain.
