Triage, monitoring, and treatment of mass casualty events ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3148628>

In most **mass casualty** situations, the number of **patients** and the severity of their injuries exceed the capability of the facility and staff, and **patients** sustaining major injuries who have the greatest chance of survival with the least expenditure of time, equipment, supplies, and personnel must be managed first. Triage is the most important ...

[PDF] The Care of Thermally Injured Patients in Operational ...

[https://www.wemjournal.org/article/S1080-6032\(17\)30098-4/pdf](https://www.wemjournal.org/article/S1080-6032(17)30098-4/pdf)

Mass casualty incidents can result in a large number of patients with multiple traumatic injuries, which often include burn injury. Appropriate triage of casualties is essential. Severely burned patients should be evacuated to a burn center if possible. **Airway management** and fluid resuscitation of burn patients present unique challenges.

The Care of Thermally Injured Patients in Operational ...

<https://www.sciencedirect.com/science/article/pii/S1080603217300984>

The **severe** thermal injury can have **long-term** debilitating effects. The management of **burn patients** in austere and operational environments is more complex. **Mass casualty** incidents can result in a large number of **patients** with multiple traumatic injuries, which often include **burn** injury. Appropriate triage of casualties is essential.

Long-term medical treatment for patients who were severely burnt at exposed sites

Du Y *et al.* Burn treatment at exposed sites

Yong Du, Guo-Zhong Lv, Shun Yu, Dan Wang, Qian Tan

Abstract

BACKGROUND

Body parts such as faces and hands retain higher exposure time in daily life on which burns might prone to accumulate. In addition, residual wounds, scar hyperplasia and contracture often exist at the late stage of a deep burn in those

If you go to a doctor for burn treatment, he or she will assess the severity of your burn by examining your skin. He or she may recommend that you be transferred to a burn center if your burn covers more than 10 percent of your total body surface area, is very deep, is on the face, feet or groin, or meets other criteria established by the American Burn Association. Your doctor will check for other injuries and might order lab tests, X-rays or other diagnostic procedures.
