Jun 11, 2012 · Summary points. Echinococcosis is a parasitic zoonosis caused by Echinococcus cestode worms. The two major species of medical importance are Echinococcus granulosus and E. multilocularis, which cause cystic echinococcosis (CE) and alveolar echinococcosis (AE), respectively. CE and especially AE are life threatening chronic diseases with a high fatality rate and ...

Diagnosis

Disease

Treatment

The diagnosis of E. granulosus infection (cystic hydatid disease) is suggested by identification of a cyst-like mass in a person with a history of exposure to sheepdogs in areas where the parasite is endemic. Cystic echinococcosis must be differentiated from benign cysts, cavitary tuberculosis, mycoses, abscesses, and benign or malignant neoplasms. Noninvasive imaging techniques such as CT scans, MRI, and ultrasound imaging are all used for detecting and defining the extent and condition of a...

Diagnosis and treatment of a case of hepatic mixed ...

<https://journals.sagepub.com/doi/full/10.1177/0300060519851651>

The **liver** section and the **hepatic** and intestinal anastomosis were placed in the drainage tube. The operation took 300 minutes, intraoperative blood loss was approximately 3000 mL, and the blood transfusion volume was 2000 mL. The postoperative pathological **diagnosis** was **hepatic alveolar echinococcosis** and **hepatic cystic echinococcosis** .

Diagnosis and treatment of a case of hepatic mixed ...

<https://www.ncbi.nlm.nih.gov/pubmed/31156003>

Jun 02, 2019 · Cases of **mixed echinococcosis infection** accompanied by extrahepatic organ metastasis are extremely rare. **Treatment** of these cases is complicated and the prognosis is extremely poor. We report a **case of hepatic echinococcosis** in a 40-year-old Tibetan man who was treated with the **hepatic** right tricuspidectomy + left **hepatic** duct jejunostomy (Roux ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4599161>

Alveolar echinococcosis (AE) is a neglected zoonosis presenting with focal **liver** lesions (FLL). 1 In endemic regions, awareness of this disease is high due to the known transmission risk (figure 1). 2 AE should, however, always be included in the differential **diagnosis** of FLLs due to the high mobility of patients. The clinical problem is thus ...

The **diagnosis** of **alveolar echinococcosis** (AE) mainly depends on the following clues: epidemiological evidence (contact history in endemic area), signs and **symptoms**, serological findings (human echinococcus IgG antibody by ELISA), imaging findings (computed tomography [CT], magnetic resonance imaging [MRI], ultrasound), intraoperative probing ...
