[A rare case of metastatic solitary fibrous tumor of the ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6744537>

Solitary fibrous tumor (SFT) is a rare **mesenchymal tumor** that typically arises from the pleura. Although it may appear in other organs, it rarely develops in the pancreas. We report herein a rare **case of metastatic SFT** of the **pancreas** originating from an **intracranial tumor** and subsequently identified as a **cystic neoplasm** of the pancreas.

Three-hundred-sixty cases of **solitary fibrous tumor** of the pleura from the **literature** are analyzed, and eight new cases are described. Of patients reported on prior to 1972, 72% had symptoms due to the **tumor** at the time of diagnosis, but only 54% of patients reported on since then were symptomatic.

Solitary fibrous tumor

Solitary fibrous tumor, also known as fibrous tumor of the pleura, is a rare mesenchymal tumor originating in the pleura or at virtually any site in the soft tissue including seminal vesicle. Approximately 78% to 88% of SFT's are benign and 12% to 22% are malignant.
