[Hypersensitivity Pneumonitis in a Housewife Exposed to ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4740644>

Jan 01, 2016 · It is a **relatively rare disease** constituting upto 2% of **interstitial lung diseases**. Knowledge of classical High Resolution Computed Tomography (HRCT) of **lung findings** aid in early diagnosis. We **report a case of subacute hypersensitivity pneumonitis** in a housewife who despite being symptomatic remained undiagnosed for two years.

<https://prod-assets.static.radiopaedia.org/cases/...> ▾

Recently, the patient got two love birds, which, along with the radiologic **findings** is highly suggestive of acute **hypersensitivity pneumonitis**.

[Case Report: Pneumomediastinum: a rare manifestation of ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4600828>

Background. Although pneumomediastinum is a recognised complication of severe lung disease, it is only rarely reported in **hypersensitivity pneumonitis**. 1–3 In addition, this **case** highlights the vital importance of obtaining a full social history and making a full clinical examination in the dyspnoeic patient. Furthermore, the **case** illustrates how diagnoses can be delayed by misleading ...

Most cases of hypersensitivity pneumonitis develop only after many years of continuous or intermittent inhalation of the inciting agent (e.g. ~ 10 years among those with bird fancier's lung) 3. Although the symptomatic disease has been classically divided into acute, subacute, and chronic types, given contradictory definitions, it has been more recently divided in acute/inflammatory type (non-fibrotic hypersensitivity pneumonitis) and chronic/fibrosis type (fibrotic hypersensitivity pneumonitis) 3,13. In th...

Hypersensitivity pneumonitis (HP) is a pulmonary disease with symptoms of dyspnea and cough resulting from the inhalation of an antigen to which the subject has been previously sensitized. The incidence of HP is unknown. A population-based study estimated the annual incidence of interstitial lung diseases as 30:100,000 and HP accounted for less than 2% of these cases.

Hypersensitivity pneumonitis

Hypersensitivity pneumonitis or extrinsic allergic alveolitis is a rare immune system disorder that affects the lungs. It is an inflammation of the alveoli within the lung caused by hypersensitivity to inhaled organic dusts. Sufferers are commonly exposed to the dust by their occupation or hobbies.
