<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4503181>

Reactive lymphoid hyperplasia of liver is an extremely rare disease which **may** show similar radiological features to hepatocellular carcinoma by various **imaging** modalities. The definite **diagnosis** of this disease depends upon a combination of morphologic findings, immunohistochemical analysis and molecular studies.

Reactive lymphoid hyperplasia of the liver requires ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4747959>

Reactive lymphoid hyperplasia (RLH) of the liver is a rare and benign nodular lesion. It remains difficult to distinguish RLH from hepatocellular carcinoma (HCC) despite recent advances in imaging modalities. We report five cases of RLH that required differential diagnosis of HCC preoperatively.
