Dec 07, 2018 · The human microbiome, or **gut** environment, is a community of different bacteria that has co-evolved with humans to be beneficial to both a person and the bacteria. Researchers agree that a person's unique microbiome is created within the first 1,000 days of life, but there are things you can do to alter your **gut** environment throughout your life.

Stat3: linking inflammation to epithelial cancer - more ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2887830>

Introduction. Chronic infection and the ensuing inflammation are among the most important epigenetic and environmental factors that contribute to tumourigenesis and the progression of established cancerous lesions []. Aberrant proliferation alone is insufficient to cause cancer, which requires both an initial
