A rare case of drain-site hernia after laparoscopic surgery and a novel strategy of prevention: A case report

A rare case of drain-site trocar site hernia

Abstract

BACKGROUND

Trocac site hernia (TSH) is a rare but potentially dangerous complication of laparoscopic surgery, and the drain-site TSH is an even rarer type. Due to the difficulty in differential diagnosis at early stages, TSH often leads to a delay in surgical intervention and eventually results in life-threatening consequences. Herein, we report an unusual case of drain-site TSH, followed by a brief literature review. Finally, we provide a novel, simple, and practical method of prevention.

[Trocar site hernia after laparoscopic surgery: A ...](https://www.researchgate.net/publication/49678597_Trocar_site_hernia_after...)

https://www.researchgate.net/publication/49678597_Trocar_site_hernia_after...

There is a risk of developing a trocar site hernia (TSH) after laparoscopic surgery, but data is sparse and based mostly on retrospective studies with a short and poorly defined follow-up period.

[5-Millimeter Trocar Site Hernias after Laparoscopy ...](https://www.researchgate.net/publication/297744934...)

<https://www.researchgate.net/publication/297744934...>

Trocar site hernia is a known complication after laparoscopic surgery, especially at 10-mm and larger port sites. Only a few cases of herniation through 5-mm port sites are reported in the...

Methodology

I. Laparoscopic Versus Open...

The goals of ventral hernia repair are relief of patient symptoms and/or cure of the hernia with minimization of recurrence rates. While laparoscopic ventral hernia repair (LVHR) has gained popularity in recent years, there is still significant controversy about the optimal approach to ventral hernia repair. This document has been written to assist surgeons utilizing a laparoscopic approach to ventral hernia repair in
