Misdiagnose of primary intimal sarcoma of the pulmonary artery as chronic pulmonary embolism: A case report

Ping Lu, Bei-Bei Yin

## Abstract

### BACKGROUND

Primary intimal sarcoma of the pulmonary artery is a rare malignant tumor originated from the pulmonary artery, which has low incidence rate and is easily misdiagnosed as pulmonary embolism. There is still no standard protocol for the treatment of primary intimal sarcoma of the pulmonary artery.

### CASE SUMMARY

This study reported one case with primary intimal sarcoma of the pulmonary artery who was admitted to our hospital in 2017. The clinical characteristics, the diagnosis, and treatment and follow-up outcomes of the patients were

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4881246>

Apr 29, 2016 · The tumor was weakly positive for CD31. Typically, poorly differentiated tumors such as **pulmonary artery intimal sarcomas** are positive for vimentin and variably positive for **smooth muscle actin** [ 5 ]. Routine staining of the tumor should be performed for **desmin**, cytokeratin, vimentin, and smooth muscle actin [ 7 ].

## Neovascular Glaucoma Due to Branch Retinal Vein Occlusion ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3550317>

**Branch retinal artery occlusion** (BRAO) and **branch retinal vein occlusion** (BRVO) rarely cause **neovascular glaucoma** (NVG). A 58-year-old woman with hypertension and type 2 diabetic mellitus complained of progressive visual loss in her right eye for the previous 3 months. At initial examination, visual acuity was 20 / 63 in the right eye.
