Unusual presentation of congenital radioulnar synostosis with osteoporosis, fragility fracture and nonunion: A case report and review of literature

Yang ZY *et al.* CRUS

Zhan-Yu Yang, Jiang-Dong Ni, Ze Long, Le-Tian Kuang, Shi-Bin Tao

Abstract

BACKGROUND

Congenital radioulnar synostosis (CRUS) is a rare deformity of the upper extremity. It is characterized by loss of rotation of the involved forearm and functional limitations in daily activities. No studies on CRUS with osteoporosis have been reported so far, and osteoporosis is usually recognized as an important dimension of genetic disorder in children. We intended to discuss the possible relationship
