Low-grade fibromyxoid sarcoma of the liver: A case report

Dugalic V¹⁹ et al. Low-grade fibromyxoid sarcoma of the liver

Vladimir Dugalic, Igor I Ignjatovic, Jelena Djokic Kovac, Nikola Ilic, Jelena Sopta, Slavenko R Ostojic, Dragan Vasin, Marko D Bogdanovic, Igor Domic, Tamara Milovanovic

Abstract

BACKGROUND

Low grade fibromyxoid sarcoma (LGFMS) is a rare and benign mesenchymal tumor with indolent course, most commonly found in young or middle-aged men. The majority of the LGFMSs are located in the trunk and deep soft tissue of the lower

Jul 29, 2010 · Background. Low grade **fibromyxoid sarcoma** (LGFMS) is a distinctive variant of fibrosarcoma. According to Evans [], who first described this pathologic entity, LGFMS presents a rare soft-tissue tumour with a high metastasizing potential, despite the benign histologic appearance. The sometimes long interval between tumour presentation and metastasis poses ...

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2988116

Low-grade fibromyxoid sarcomas (LGFMS) are very rare soft tissue tumors. Evans first described the **tumor** in 1987 [1]. Most patients range in age from 25 to 46 years, but cases of this **tumor in children** have been **reported** [2–4]. The **tumor** typically occurs in the lower extremity, groin, head, and neck area [1, 3–5], but rare cases of LGFMS have been found in the chest wall, shoulder, arm [6], forearm [7], ...

https://www.ajronline.org/doi/full/10.2214/AJR.14.13972

Low-grade fibromyxoid sarcoma is a rare soft-tissue sarcoma characterized by a relatively benign histologic profile, with fibrous paucicellular and myxoid hypervascular zones . In the short term (< 5 years), **low-grade fibromyxoid sarcoma** has an indolent clinical behavior but also a tendency for late local recurrence and metastasis . It is more common in young and middle-aged adults but has increasingly ...

Low-grade fibromyxoid sarcoma

Rare Type

Low-grade fibromyxoid sarcoma is a rare type of low grade sarcoma first described by Harry Evans in 1987. It is characterized by a long and indolent clinical course and the possibility of local recurrence or distant metastases in a subset of patients. Unlike many other types of cancer, low grade fibromyxoid sarcoma can metastasize after many years, sometimes decades after the initial presentation of the tumor.
