Feb 08, 2016 - Phaeochromocytoma is a rare endocrine disorder with different cardiovascular presentations. In this brief report, we discuss a case of a 59-year-old woman who presented with acute ST segment elevation **myocardial infarction** secondary to phaeochromocytoma. Coronary angiogram showed non-obstructive coronary artery disease.

Pheochromocytoma in a 49-year-old woman presenting with acute myocardial infarction: A case report

Wu HY *et al.* Pheochromocytoma presenting with acute myocardial infarction

Hao-Yu Wu, Yi-Wei Cao, Tian-Jiao Gao, Jian-Li Fu, Lei Liang

**Abstract**  
**BACKGROUND**  
Pheochromocytoma is a rare endocrine tumor arising from chromaffin cells and having extensive and profound effects on the cardiovascular system by continuously or intermittently releasing catecholamines. The clinical manifestations of pheochromocytoma are diverse, and the typical triad, including episodic headache,
