Mammary Analogue Secretory Carcinoma of the Palate: Case ...
https://www.hindawi.com/journals/crid/2019/7416302

Abstract Introduction Case Presentation Discussion Conclusion

Mammary analogue secretory carcinoma (MASC) is a recently described salivary gland tumor, with a limited number of published reports. Less than three hundred cases have been reported in the literature and only 18 of these cases have been reported in minor palatal salivary glands, though publication bias is likely a factor. We present a case of a 57-year-old male who was diagnosed with MASC tumor presenting in a minor salivary gland and briefly review the current literature. MASC has a variety of histological feat...

Mammary analogue secretory carcinoma

Mammary analogue secretory carcinoma is a salivary gland neoplasm that shares a genetic mutation with certain types of breast cancer. MASCSG was first described by Skálová et al. in 2010. The authors of this report found a chromosome translocation in certain salivary gland tumors that was identical to the(p13;q25) fusion gene mutation found previously in secretory carcinoma, a subtype of invasive ductal carcinoma of the breast.
