Cutaneous myiasis with eosinophilic pleural effusion: a rare case report

Cutaneous myiasis with eosinophilic pleural effusion

Abstract

BACKGROUND

Cutaneous myiasis is frequently observed, however eosinophilic pleural effusion induced by this condition is rare.

CASE SUMMARY

We report the case of a 65-year-old female Tibetan patient from Qinghai Province, who presented to West China Hospital of Sichuan University around mid-November 2011 with a chief complaint of recurrent cough, occasional hemoptysis, and right chest pain.

Jan 01, 2007 · However, eosinophilia is a relatively **rare** finding in malignant **pleural effusions**, and it has been used as an indicator of good prognosis. In clinical experience, very few **cases** of **malignant lymphomas** accompanied by EPE have been reported. In this **report**, we present an 82-year-old otherwise healthy man with the initial presentation of left EPE.

Jul 01, 2000 · **Myiasis** is the infestation of live humans with larvae of Diptera (true flies). This **report** describes a protracted illness caused by infestation with Hypoderma lineatum, resembling the hypereosinophilic syndrome. A 35-year-old man had a 9-month multisystemic illness with pronounced eosinophilia, pleuritis, pericarditis, and myositis.

Pleural Effusion

Medical Condition

An excessive collection of fluid in the pleural cavity.

 Common (More than 200,000 cases per year in US)

 Often requires lab test or imaging

 Treatment from medical professional advised

 Can last several months

Can be due to altered permeability of the pleural membranes, heart failure, pulmonary embolism, infection or cancer. Characterized by coughing, sharp chest pain and shortness of breath. Treatment includes medication, surgery and treatment of the cause of the effusion.

Symptoms

- Coughing
- Shortness of breath
- A sharp pain in the chest
- Fast breathing

Treatments

Treatment depends on the cause of the condition.

Medication
