Abstract

Introduction

Case Presentation

Discussion

Conclusion

Xanthomas are localized nonneoplastic lesions within tissues that may manifest as papules, plaques, or nodules. These lesions can be found anywhere along the gastrointestinal tract, commonly in the stomach and colon, and rarely in the small intestine and esophagus. **Esophagogastroduodenoscopy (EGD) with biopsy** is the gold standard tool for diagnosis. Here, we report a rare case of a lower solitary nodular esophageal xanthoma in an elderly black female. Correspondingly, all cases of esophageal xanthomas ...

Diffuse xanthoma in early esophageal cancer: A case report

Yang XY *et al.* Diffuse xanthoma concurrent with esophageal cancer

Xiao-Yun Yang, Kuang-I Fu, Yan-Ping Chen, Zhen-Wei Chen, Jing Ding

Abstract

BACKGROUND

Gastrointestinal xanthomas are asymptomatic and infrequent non-neoplastic lesions that commonly occur in the stomach with *Helicobacter pylori*-associated gastritis and rarely in the esophagus. To date, there have been no reports of esophageal xanthoma combined with esophageal cancer. Herein, we present the first case in the literature of a diffuse xanthoma complicated with early esophageal cancer. Moreover, this
