Borderline resectable **pancreatic** cancer and vascular resections in the era of
neoadjuvant therapy

Danko Mikulic, Anna Mrzljak

Abstract

While pancreatic cancer is still characterized by early systemic spread and poor outcomes, the treatment of this disease has changed significantly in recent years due to major advancements in systemic therapy and advanced surgical techniques. Broader

Borderline resectable pancreatic cancer

<https://pubmed.ncbi.nlm.nih.gov/26970276>

Pancreatic surgery has significantly changed during the past years and **resection** approaches have been extended beyond standard procedures, including **vascular** and **multivisceral resections**. Consequently, **borderline resectable pancreatic ductal adenocarcinoma** (BR-PDAC), which has recently been defined by the International Study Group for **Pancreatic Surgery** (ISGPS), has become a controversial issue with regard to its management in terms of upfront **resection vs. neoadjuvant treatment** ...

Neoadjuvant therapy

CPT code

Procedure

Neoadjuvant therapy is the administration of therapeutic agents before a main treatment.

One example is neoadjuvant hormone therapy prior to radical radiotherapy for adenocarcinoma of the prostate.

Neoadjuvant therapy aims to reduce the size or extent of the cancer before using radical treatment intervention, thus both making procedures easier and more likely to succeed and reducing the consequences of a more extensive treatment technique,

When resection with negative margins is achieved after neoadjuvant therapy, the prognosis for BR tumors approaches and even exceeds that for resectable disease. This review presents the current definitions,...

Pancreatic Cancer

Medical Condition

Cancer of pancreas, an organ which is behind the lower part of the stomach. This causes abdominal pain, jaundice, itchy skin, fatigue and weight loss.

- Rare (Fewer than 200,000 cases per year in US)
- Often requires lab test or imaging
- Treatable by a medical professional
- Can last several months or years

The exact cause of pancreatic cancer is unknown. Risk factors include diabetes, chronic pancreatitis and stomach ulcer. In the early stage, it is asymptomatic. Common symptoms at later stages are weight loss and abdominal pain. Treatment depends on the location of tumor, age and general health. Treatment includes surgery, chemotherapy and radiation.

Symptoms

Early stage of pancreatic cancer may be asymptomatic. Symptoms will show up only when the disease progresses and include:
