## Distribution and predictive value of initial presenting ...

<https://link.springer.com/article/10.1007/s00586-020-06425-4> ▾

May 06, 2020 · The distribution of spinal metastases is associated with primary tumor type and initial presenting symptoms. The predictive value of initial presenting symptoms differs in age groups, but resembles in cancer types. The presence of night-aggravating pain had relative high value in predicting metastases in cancer patients under 65 years old. This is a preview of subscription content, log in to ...
