**Sacral chondroblastoma—a rare location, a rare pathology: A case report and review of literature**

Sacral chondroblastoma

## Abstract

### BACKGROUND

Chondroblastoma (CB) is an intermediate tumor of cartilage origin. CB involving the sacrum is a very rare pathology.

### CASE SUMMARY

A 17-year-old male with sacral CB was diagnosed as CB during the first surgery, and 18 mo later, the tumor recurred and a second surgery was performed with the same

pathology result of CB

## Primary neuroendocrine tumor of the sacrum: case report ...

<https://pubmed.ncbi.nlm.nih.gov/19360403>

Abstract. Primary carcinoid tumor (well-differentiated neuroendocrine tumor) of the bone involving the sacrum is extremely **rare**. We **report** the **case** of a 72-year-old man who presented with a 20-year history of intermittent low back pain and was found to have an intraosseous **sacral** mass on imaging. A needle biopsy revealed that this lesion was a well-differentiated neuroendocrine tumor.

## [PDF] Sacral Chordoma-A Rare Case Report with Brief Review ...

<https://www.semanticscholar.org/paper/Sacral-Chord...>

Chordoma is a primary **sacral** neoplasm of ectodermal origin and makes up (1-4)% of all primary bone tumors. [1] It is usually present on the midline cerebrospinal axis and the most common locations are the spheno-clival region and the sacrum [1]. Chordomas occur in all ages and in both sexes, but the sacrococcygeal tumours are most common in fifth and sixth decades of life [2]. It is locally ...

## Chondromyxoid fibroma of the sacrum: A case report and ...

<https://pubmed.ncbi.nlm.nih.gov/27274412>

Background: **Chondromyxoid fibroma (CMF)** is an extremely rare, benign cartilaginous tumor that makes up <0.5% of all bone tumors, typically presenting in the second or third decade of life. CMF of the sacrum is exceedingly rare, with only seven documented cases reported in the neurosurgical literature.

## Chondroblastoma: An Update | Archives of Pathology ...

<https://meridian.allenpress.com/aplm/article/141/6/...> ▾

Jun 01, 2017 · Chondroblastoma is a rare primary **bone tumor** of young people that typically arises in the ends of the long bones. Radiologic investigations show a small, circumscribed, lytic lesion. The **tumor** is characterized histologically by the proliferation of chondroblasts along with areas of mature cartilage, giant cells, and occasionally, secondary aneurysmal **bone** cyst formation.
