The 5-year overall and disease-free survival rates after laparoscopic liver resection for hepatocellular carcinoma were 50% to 75% and 31% to 38.2%, respectively.

### Pure laparoscopic hepatectomy for hepatocellular carcinoma ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3782686>

Sep 27, 2013 INTRODUCTION. Since the first successful report of laparoscopic liver wedge resection in 1992, pure laparoscopic hepatectomy is thought to be a less invasive procedure than conventional open hepatectomy for the resection of hepatic lesions. In a comprehensive meta-analysis study, laparoscopic hepatectomy was compared to open hepatic resection in 1678 patients across 26 studies.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3967888>

Jul 24, 2013 The conversion rate of 13% was higher than those observed in other types of laparoscopic surgery, such as colectomy, 5 but has significantly decreased since the first reports of HCC resection, in which it often reached 320%. 28 An analysis of causes of conversion is not possible in the present series because the reasons for conversion were not specified in over half of the patients.

### Surgical outcomes following laparoscopic major hepatectomy ...

<https://journals.lww.com/md-journal/Pages/article...>

Laparoscopic major hepatectomy including pure laparoscopic donor right hemihepatectomy is technically demanding and requires great expertise in both open liver surgery and laparoscopic surgery. However, we believe that laparoscopic major hepatectomy can be a safe and feasible procedure in select patients and donors when performed by an experienced surgeon.

### Analysis of Laparoscopic Liver Resection for ...

<https://www.researchgate.net/publication/348760164...>

Laparoscopic hepatectomy is feasible for hepatocellular carcinoma (HCC) today. This is a retrospective study of the patients with HCC treated by liver resection with a totally laparoscopic approach.

<https://journals.sagepub.com/doi/full/10.1177/0300060519872585>

We report here a patient with hepatocellular carcinoma (HCC) who was treated by radiofrequency ablation (RFA) and complicated by a huge biloma. However, after treatment of approximately 1 month, his biloma was completely released. In the ensuing 2 years, the patient has been free from recurrence of the biloma and HCC.

### (PDF) Long-term outcomes of Laparoscopic versus Open liver ...

<https://www.researchgate.net/publication/340043784...>

Background Only few studies compared laparoscopic to open liver resection regarding degree of liver injury, inflammatory response and long-term outcomes. The aim of this study was

## Hepatocellular Carcinoma

Medical Condition

The most common form of liver cancer often seen in people with chronic liver diseases like cirrhosis.

- Rare (Fewer than 200,000 cases per year in US)
- May be preventable by vaccine
- Often requires lab test or imaging
- Treatable by a medical professional
- Can last several months or years

It is caused mainly due to the chronic infection of the liver or DNA mutation of the liver cells. It is characterized by unexplained weight loss, upper abdominal pain and yellowing of the skin. Treatment options include hepatectomy, target drug delivery and the use of radiation to kill the cancerous cells.

### Symptoms

The early stages of the disease do not present any symptoms but in the later stages the symptoms which are noted are as follows:

- Upper abdominal pain
- Weight loss
- Jaundice
- Fluid in the abdomen
- Liver failure

### Treatments

Treatment options include hepatectomy, target drug delivery and the use of radiation to kill the cancerous cells.

#### Medication

- Chemotherapy: Therapy where the drugs are used to kill the cancer cells.
- 5-Fluorouracil Capecitabine Irinotecan Oxaliplatin
- Target drug delivery: Drugs which are target oriented help in slowing down the progression of the disease.
- Sorafenib

Medical procedures: Hepatectomy Liver transplantation Ablation

Therapies: Radiation therapy

Successful totally laparoscopic right trihepatectomy following conversion therapy for hepatocellular carcinoma: A case report

Zhang JJ *et al.* Laparoscopic right trihepatectomy

Jun-Jing Zhang, Ze-Xin Wang, Jian-Xiang Niu, Ming Zhang, Ni An, Peng-Fei Li, Wei-Hua Zheng

Abstract

BACKGROUND

About 20%-30% of newly-diagnosed hepatocellular carcinoma (HCC) patients are surgically feasible due to a variety of reasons. Active conversion therapy may provide opportunities of surgery for these patients. Nevertheless, the choice of surgical
