**Pylephlebitis: a rare complication of a fish bone migration mimicking metastatic pancreatic cancer: A case report**

Pylephlebitis: Case report

**Abstract**

**BACKGROUND**

Pylephlebitis is a rare condition. Poorly recognized by clinicians and with few references. In this case the clinical appearance resembled the clinical course of a pancreatic cancer and was originated by a the ingestion of a fish bone, making the case more interesting and rare.

**Pylephlebitis**, or infective thrombosis of the portal vein, is a serious condition with significant morbidity and mortality, which can complicate intraabdominal infection of any etiology that occurs in the region drained by the portal venous system. The diagnosis of **pylephlebitis** requires the demonstration of portal vein thrombosis, usually accompanied by bacteremia in a febrile patient.
